DETAILED ACTION

Information Disclosure Statement

1. The Information Disclosure Statement submitted by applicant contained a plurality of partial references, and sources which were either too succinct to ascertain a legitimate case for the patentability or lack thereof over the art of record. The references submitted have been analyzed for their value as pertinent to the Applicant's proposed invention but in a number of cases such as the Cardiac Cath Lab Systems RMC-3100/3200, the Applicant failed to provide enough information about the system for the Examiner to establish both a scope for the reference and its specific relationship to the invention disclosed.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Ben-Haim et al. (US 6,788,967). Ben-Haim et al. disclose a system including one or more probes for gathering electrical information pertaining to the heart (Fig 2,3, and Col 9 Line 43-53), a processor which can process electrical information and imaging information pertaining to the heart (Col 19 Line 16-55), a display (Col 17 Line 45-60), image processing tools (Col 17 Line 45-60, Col 18 Line 25-45), ultrasound imaging acquisition system (also mentioned are an MR imaging system and CT imaging system)

(Fig 12, Fig 15 and Col 18 Line 25-45), a positioning system for locating the probes, used to create a structural map of the heart and define the position of the probes (Col 19 Line 6-15, Col 18 Line 25-60, Fig 13, Fig 10A-D), a mapping function configured to process information about the structure as well as the placement/position of in vivo probes (Col 15 Line 43-65, Col 17 Line 32- Col 18 Line 25), image reconstruction tools (Col 20 Line 20- Col 21 Line 30, Claims 1 and 13), a construction algorithm based on multiple image slices (Col 17 Line 30 – Col 18 Line 5), the creation of a three-dimensional image/map based on position information from the electrophysiology 3d mapping system (Fig 13, Fig 15 Col 17 Line 30-45) pacing and non-pacing logic for the heart within the electrophysiology monitoring logic (Col 19 Line 40-65), and reporting logic for electrical information as pertains to the heart (Claims 1, 13 and Fig 15).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US patents 6950689, and 7174201 contain a wealth of information on electrophysiology systems similar to that which is disclosed.
